

A case should be...

Environmental Practices

Yeong Yang Technology is devoted to environmental protection by conducting our operations and activities in a responsible and sustainable manner. We recognize that reducing and, where possible, eliminating the environmental impacts of our activities is an important part of our mission. We practice the principles in our factory in several ways including energy conservation, reducing air pollution and minimizing toxics and hazardous waste.

In the past years, we gradually replaced the 2500 sets of incandescent lamps into fluorescent lamps which saved near 70% of energy consumption. In the future, we plan to replace the fluorescent lamps with LED lamp, saving further 60% energy consumption. We also advocate the Earth Hour activity and realize in daily office hour. In the noon time, we closed the light for one hour to save the energy. By this way, we save around 7% electricity consumption.

We also upgrade our facilities to show our support to the government's green policy. We change the old air conditioners into new one with Energy-saving mark. The office computers are replaced by the new model with energy-star. The production machines are upgraded with newer machines which have better energy efficiency.

To reduce the hazard wastewater, the old liquid painting line is substituted with the powder coating line with air filter system. A set of waste pipelines is built to separate the wastewater, so it doesn't leak into the sewers anymore. The air pollution is controlled, and the wastewater is reduced effectively.

With our constant effort and improvement, the factory now run in better power efficiency and environmental- friendly. We believe the environmental protection is a long-term task. We'll take our responsibility and keep devote ourselves to the environmental practices.
